

Cerner Camera Capture for IOS and Android Devices

Cerner Camera Capture is a stand-alone application that facilitates photo capturing of clinical photos by allowing the Physician to use their iPhone, iPad or Android device(s) to select the patient for imaging by their schedule, patient list, or through an ad hoc patient search.

The photos taken will populate into the patient's EMR and **must be attached to a PowerNote**. Photos **will not be stored on the device** since this is a HIPAA compliant input application.

Images uploaded to the Multimedia Manager queue will be purged **every 30 days**. If images are not added to a note within PowerChart, this content will be lost.

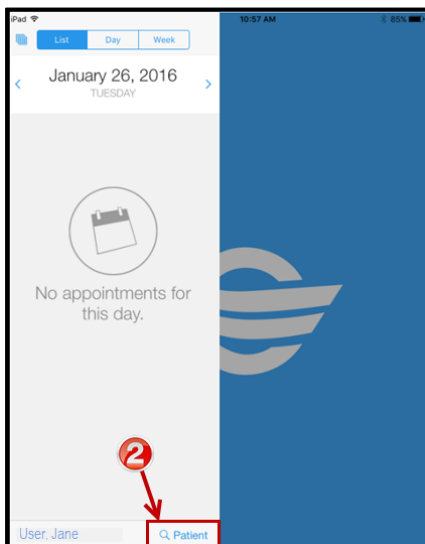

Images uploaded under the Confidential Image note type will be purged at an earlier rate of 7 days after the image is captured in order to provide additional security as the content is of a sensitive nature.

CAPTURING THE PHOTOS

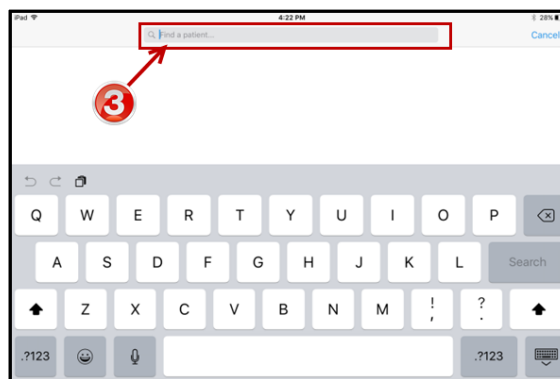

1. Log into the Cerner Camera Capture application using the **Camera Capture icon** on your iPhone, iPad, and/or Android device.

2. Click the [Patient](#) link at the bottom of the screen to search for the patient.

3. Search for the patient in the **Find a Patient** search window by entering the patient's name or MRN number.

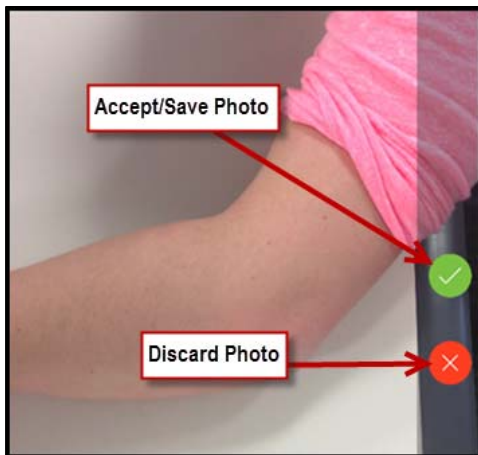

4. Click the **White circle** to take the photo.

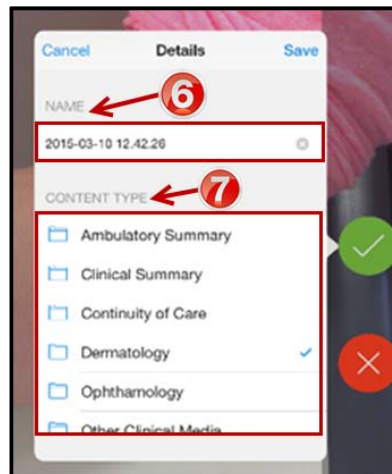

5. To **Accept/Save** the photo, select the **GREEN circle** with the check mark.

To **Discard** the Photo, select the **RED circle** with the **X**, and repeat step 4 until the desired photo is taken and saved.

6. **Re-name** the photo.

7. Select the appropriate **Content Type** (category).

8. Click the white **Done** button when finished.

NOTE: The Photos will be saved to the **Media Gallery** in the Patient's Record. They will be available to view in PowerChart (Desktop).

ATTACHING PHOTOS TO THE MEDICAL RECORD

1. Log into **PowerChart (Desktop)**.
2. Search for the Patient and Encounter.
3. Under the Menu column, select **MultiMedia Manager**.

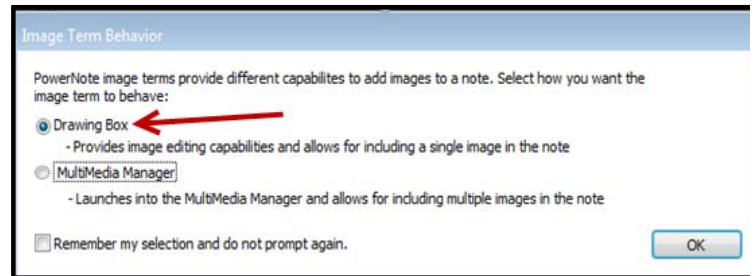

NOTE: The photos taken with Camera Capture will be visible.

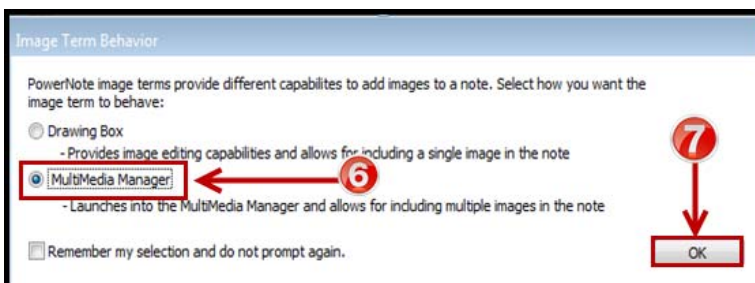

4. Create and Open the appropriate **PowerNote**.
5. Click the **Insert Image** button.

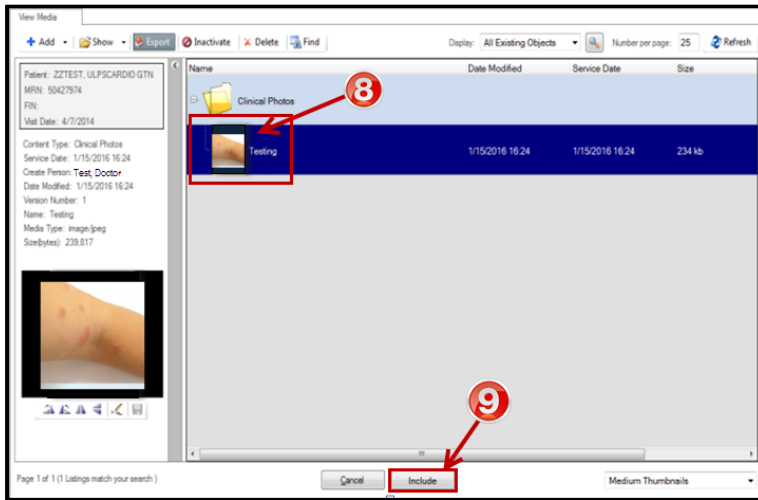

NOTE: The **Image Term Behavior** window will display. The default selection is **Drawing Box**.

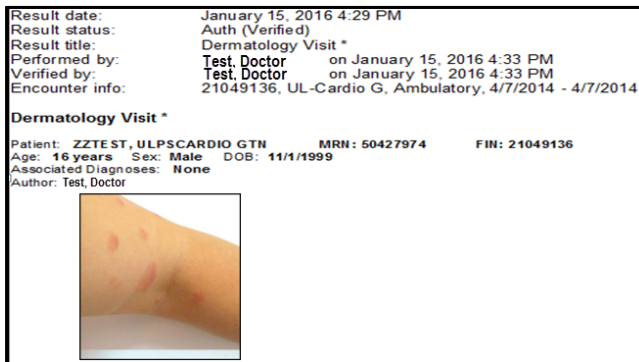

6. Select the **MultiMedia Manager** button.
7. Click **OK**.

- 8. Select the photo to load into the PowerNote.
- 9. Click the **Include** button

The photo is now visible within the body of the PowerNote.
